## Target audience

Practicing pediatricians, family practice physicians, primary care providers, nurse practitioners and allied health care professionals

## Desired outcomes

1. Increase knowledge regarding the promotion, protection and support of optimal infant and maternal health and nutrition from conception through the completion of weaning.
2. Use evidence-based evaluation and management for the treatment of obstructive sleep apnea in children.
3. Verbalize the rheumatic conditions most commonly associated with fevers.
4. Gain practical knowledge of the short- and long-term orthopedic effects of obesity in children.
5. Increase knowledge of sleep disorders in children.
6. Describe established and novel applications of team leadership, team dynamics and the application of telemedicine during newborn resuscitations.
7. Implement evidence-based practice changes to optimally treat Type 2 diabetes in the primary care setting.
8. Discuss typical and atypical presentations of infectious diseases.
9. Summarize salt handling and defects in infants and current recommendations for salt concentrations in IV fluid management.
